

PLASTIC BOXES

COLLAPSIBLE BOXES

PRODUCT CHARACTERISTICS

- ergonomic hand holes with a double-S-shaped rim provide comfortable grip
- additional stability is provided by 8/6-hinged joining
- the space-saving of the collapsed box can be up to 80%
- the locking handles prevent unintentional collapsing
- easy material recycling at the end of product life

Most foldable plastic containers are made of different materials which have to be separated costly from each other in the recycling process. Especially the use of POM (polyoxymethylene) in resilient components causes difficulties. Even tiny residual amounts in recycled PE or PP release harmful formaldehyde during processing.

In all its folding and collapsible containers Ringoplast uses only materials that can be recycled. This makes recycling easy and environmentally responsible.

COLLAPSIBLE BOX

outside dimension **600 x 400 x 171 mm**
 inside dimension **570 x 370 x 161 mm**
 folded height **45 mm**
 weight **1.900 g**
 stacking load **up to 250 kg**
 working load **up to 20 kg**
 stacking height **163 mm**
 item no. **KB-617**

COLLAPSIBLE BOX

outside dimension **600 x 400 x 233 mm**
 inside dimension **570 x 370 x 222 mm**
 folded height **45 mm**
 weight **2.150 g**
 stacking load **up to 250 kg**
 working load **up to 20 kg**
 stacking height **227 mm**
 item no. **KB-622**

All collapsible boxes are available in green and grey as standard.
